Equation Challenge

$7x - 6 = 22 + \square$ → $4x - \square = 22$ → $4x = \square$ ← $\square x + 24 = 52$ ← $6x + 24 = 52 + 2x$

$2x - \square = 5$ → $\square x = 14$ → $x = 7$ ← $7x = \square$ ← $7x - \square = 40$

$\square(x - 4) = \frac{9}{8}$ → $3(x - 4) = \square$ → $x - \square = 3$ ← $3(x - 4) = \square$ ← $3(x - 4) + \square = 14$

Fill in the boxes and circles
